## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 9, 10, and 13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 9 uses repetitive language in lines 3 and 4. It is recommended that line 4, "after said first plastic substrates and said second plastic substrates" be deleted. Claim 10, line 3, discloses "after said adhesive is dried" which lacks antecedent basis. Claim 10, lines 3-4, "after said first plastic substrates and said second plastic substrates with an adhesive step" is not idiomatic English.

### ***Drawings***

3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: Element 182 on page 8. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be

notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. The drawings are objected to under 37 CFR 1.83(a) because they fail to show the proper alignment between webs 170 and 160 as described in the specification. The conductive patterns as shown in Fig. 3 would not be in contact with each other. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Specification***

5. The disclosure is objected to because of the following informalities: Page 1, "portable" is misspelled.

Appropriate correction is required.

***Allowable Subject Matter***

6. Claims 1-8, 11, 12, 14-16 are allowed.
7. Claims 9-10, and 13 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: None of the prior art show all of the instantly claimed limitations. In particular the admitted prior art fails to suggest forming perpendicular conducting lines on two indefinite length webs, coating a liquid crystal over one of the conducting lines, removing portions of one of the webs outside of block shaped active areas, and sealing the two webs together to form a plurality of passive matrix display panels. Yamazaki et al. teaches that passive matrix displays can be formed from two continuous webs but fails to show the particular coating and cutting steps of the instant claims. Muramatsu, Hagiwara, Lee, Doane et al. Onishi, and Kim are indicative of passive matrix displays created by perpendicular conducting lines.
